CHITY GROUP

Logo System

Which logo to use, how much space it needs, how small it can go, and what to avoid

1. The logo family

CHITY GROUP has one logo in several forms. Choose the form by the space available and the background it sits on. **Primary** is the stacked version (mark above the name). **Secondary** is the horizontal version (mark beside the name). Every form is supplied as SVG (vector, for web and print) and PNG (for Word, PowerPoint and Canva) on transparent backgrounds.

FORM	USE WHEN	FOLDER
Primary logo (stacked, with tagline)	The default. Covers, title slides, signage and packaging. At least 200 px or 50 mm wide.	01_Primary_Stacked
Primary logo, no tagline	Smaller sizes of the stacked logo, between 120 and 200 px.	01_Primary_Stacked
Secondary logo (horizontal, with tagline)	Wide spaces: website headers and footers, banners, letterhead. At least 300 px or 75 mm wide.	02_Secondary_Horizontal
Secondary logo, no tagline	Tight or wide spaces under 300 px: email signatures, app headers, small footers. At least 140 px or 37 mm.	02_Secondary_Horizontal
Submark (the C alone)	Avatars, app icons, favicons and watermarks, where the full name appears nearby or the brand is established.	03_Submark
App icon and favicon	Browser tabs, home screens, app stores and social profile pictures.	04_AppIcon_Favicon
One-color versions (Navy or White)	Single-ink printing, stamps, engraving, and backgrounds where the full-color logo does not work.	All folders
Endorsement line	"A CHITY GROUP COMPANY" for operating businesses. See Brand Architecture.	05_Endorsement

Never rebuild, retype or redraw any part of the logo. Always use the supplied files.

2. Anatomy and proportions

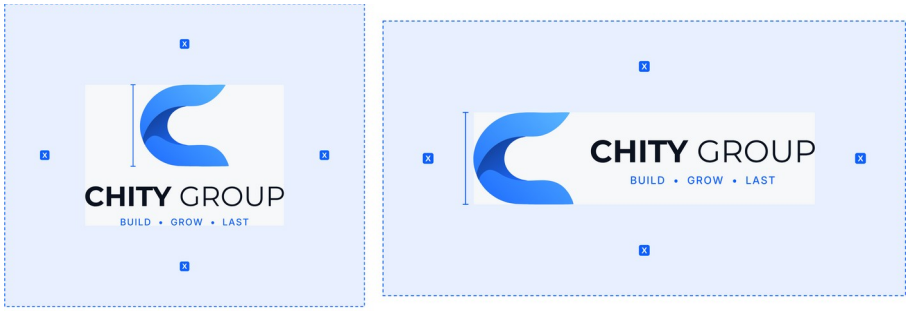

Let C be the cap height of the wordmark. In the stacked logo every distance is a fixed multiple of C.

MEASUREMENT (STACKED LOGO)	UNITS	IN C
Mark width	315	4.6 C
Mark height (the clear-space unit X)	288	4.2 C
Gap from mark to wordmark capitals	72	1.04 C
Wordmark width	708	10.3 C
Gap from wordmark baseline to tagline capitals	44	0.64 C
Tagline cap height	24	0.35 C
Tagline width, centered under the wordmark	455	6.6 C

In the horizontal logo the mark and wordmark keep the same size and the gap between them is 55 units (0.8 C). The wordmark is Montserrat Bold (CHITY) and Montserrat Regular (GROUP) as outlined artwork. The tagline is Inter Medium in capitals with 0.1 em letter spacing. The mark is a true vector and every variant derives from one master shape.

3. Clear space

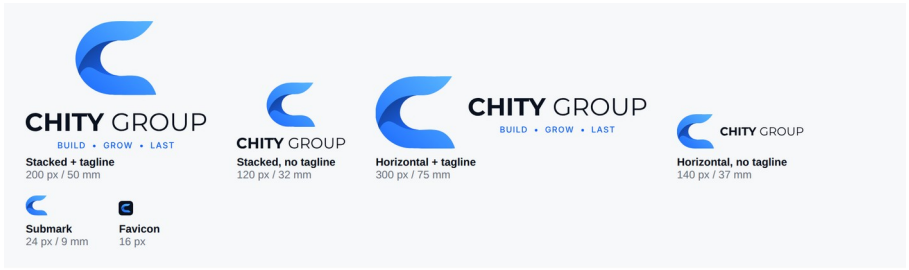

Keep a free margin of X on all four sides of every logo, where X is the full height of the C symbol in that logo. In the standard files X is 4.2 times the wordmark cap height. Nothing may enter this zone: text, images, other logos or the edge of the page.

- The same definition applies to every form: stacked, horizontal and submark (for the submark alone, X is the height of the mark).
- The app icon, favicon and social profile images are exempt; their navy container sets its own padding.
- Inside websites, apps and email signatures, where space is tight, the margin may reduce to 0.5 X. It may never be smaller.

4. Minimum sizes

The limiting factor is the tagline: below the sizes listed its capitals fall under about 6.5 px, so use the version without the tagline. For stamps, embroidery, engraving and anything below the one-color minimums, use the solid submark (24 px or 9 mm minimum). The favicon is supplied at 16 px.

FORM	ON SCREEN	IN PRINT
Primary logo with tagline	200 px wide	50 mm (2 in)
Primary logo, no tagline	120 px wide	32 mm
Secondary logo with tagline	300 px wide	75 mm
Secondary logo, no tagline	140 px wide	37 mm
Submark, full color	24 px wide	9 mm (0.35 in)
Submark, one-color with fold line	120 px wide	30 mm

5. Backgrounds and contrast

Choose the file by the background. Contrast is measured between the logo color (Cloud White or Deep Navy) and the background.

The imagery tiles are illustrations, not photographs.

BACKGROUND	USE THIS FILE	CONTRAST	NOTE
Cloud White #F7F8FA, white	Full color, Light	17.6:1	Default for light layouts.
Deep Navy #0B1220	Full color, Dark	17.6:1	Default for dark layouts.
Royal Blue #1E6BFF	White one-color	4.3:1	Keep the logo large.
Action Blue #0D60FF	White one-color	4.8:1	
Slate Gray #6B7280	White one-color	4.6:1	
Sky Blue #5AB8FF	Navy one-color	8.7:1	
Brand gradient	Navy one-color	4.1:1 to 8.7:1	Never the white logo: it falls to 2.0:1 at the Sky end.
Photography	White one-color on dark, calm areas; Navy one-color on light, calm areas	Judge by eye	If the logo is not clear at a glance, use a solid panel.

- The full-color logo is used only on Cloud White and Deep Navy. On any other color or on imagery, use a one-color version.
- Never place the logo over busy detail, text or an uneven photograph.

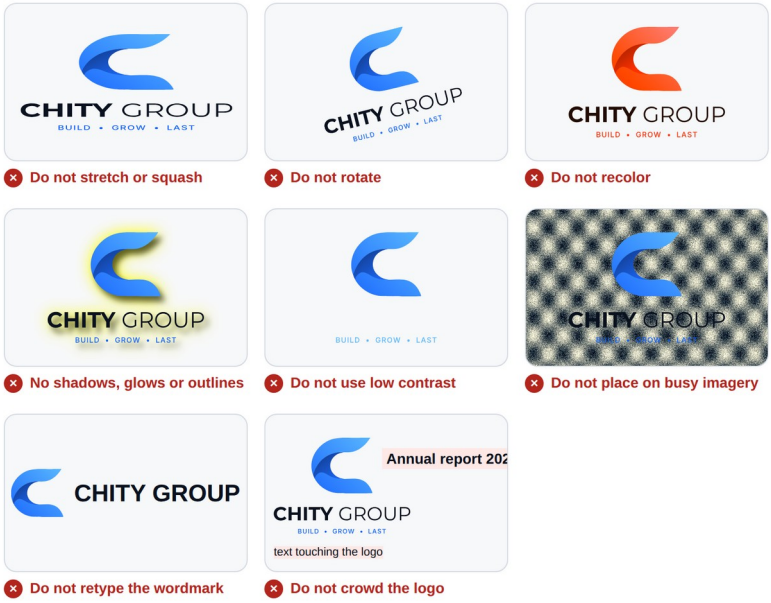

6. Placement and size

USE	FILE	SIZE
Website header	Secondary, no tagline	140 to 180 px wide
Website footer	Secondary with tagline, or no tagline	300 px, or 140 to 160 px
Email signature	Secondary, no tagline	140 to 160 px wide (export at twice the size)
A4 letterhead	Secondary, no tagline, top left	40 to 45 mm wide
Business card	Secondary, no tagline, Light or Dark	40 to 45 mm wide
Presentation title slide	Primary with tagline	4 to 5 in wide
Presentation content slides	Submark or Secondary, no tagline	Small, in a corner
Social profile picture	App icon	As the platform requires
Signage, vehicles, packaging	Primary with tagline, from the SVG	Largest practical size

7. Submark, app icon and favicon

- **Submark:** use the C alone only when the full name appears nearby (for example an avatar beside the account name) or when the brand is established (an app icon). Never as the only brand identification on first contact.
- **App icon:** a Deep Navy rounded square (corner radius 22.5% of the width) with the full-color mark centered at 56% of the width. 1024 by 1024 px.
- **Favicon:** the same design with the mark at 64% of the width so it stays readable. Files cover 16, 32, 48 and 64 px.
- **Apple touch icon:** a full-bleed navy square (the device rounds the corners), 180 by 180 px.
- Never recolor the navy container or change the mark inside it.

8. What to avoid

- Stretching, squashing, rotating, cropping or skewing the logo.
- Recoloring it, changing the gradient or swapping its colors.
- Adding shadows, glows, outlines, bevels or any effect.
- Using a version that clashes with its background, such as the Dark logo on a light background.
- Retyping the wordmark or changing its font, spacing or the gap between the words.
- Separating the elements, moving the tagline, or placing the tagline on a gradient.
- Entering the clear-space zone.
- Recreating the logo from a screenshot or photograph.

9. Files and naming

Names follow CHITYGROUP_[Asset]_[Variant]_[Background]_[FORMAT]. Example: CHITYGROUP_PrimaryLogo_FullColor_Light_SVG.svg.

FIELD	VALUES
Asset	PrimaryLogo, PrimaryLogoNoTagline, SecondaryLogo, SecondaryLogoNoTagline, Submark, AppIcon, Favicon, AppleTouchIcon, EndorsementLine
Variant	FullColor, Navy, White (submark also NavySolid, WhiteSolid); endorsement line: Slate, White
Background	Light (for light surfaces), Dark (for dark surfaces), Transparent (works on either)
Format	SVG (web and print), PNG (Office and Canva; 3000 px on the long edge), ICO (favicon)
